Introduction

Congratulations on your purchase of the ESI *Dr. DAC nano*, a high quality USB audio interface featuring both an analog and an optical digital output for high quality stereo audio playback.
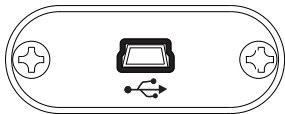

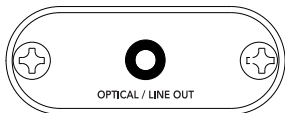

Usage

One of the best features of *Dr. DAC nano* is its simplicity - you can simply plug in the unit with the provided USB cable to your Mac or PC. The hardware will automatically be detected and will be usable within seconds.

Windows XP and Windows Vista notifies you of the detection and driver installation. Under *Control Panel -> Sounds and Audio Device Properties -> Audio*, you can select the USB Audio Device entry of *Dr. DAC nano* for playback. Please note that many applications require their individual settings.

Under Mac OS X, you can select and configure *Dr. DAC nano* via the *Audio MIDI Setup* application that you can find in your *Applications* folder.

Correspondence

For technical support inquiries, contact your nearest dealer (where you purchased the product), local distributor or the ESI support online on our website www.esi-audio.com.
