

cosMik Lav

Professional Lavalier Condenser Microphone for Smartphones

cosMik Lav is a professional omnidirectional lavalier microphone, providing high quality audio recording for mobile devices such as iPhone, iPad and various Android devices. The input sensitivity and level is optimized for these mobile devices, providing perfect signal levels in order to significantly improve the audio quality of your recordings.

cosMik Lav is very easy to use and works with most audio and video recording apps, providing you with a hands-free solution to capture natural and clear sound of speeches, lectures, interviews, dictations and much more. The polar pattern of cosMik Lav is omnidirectional, which means that you will get a perfect response even if the speaker is moving while recording.

The special connector makes it possible to connect your headset at the same time - providing you with a quick and easy solution to playback and listen to your recordings without unplugging the microphone first.

The included clip can be attached to your shirt or lapel and the foam pop shield softens the voice and shields from wind noise.

There is also a pouch included, for convenient storage and transport.

Features

- compact lavalier microphone
- omni-directional condenser capsule
- 40Hz - 20kHz frequency range
- -39dB sensitivity
- 3k Ohm output impedance
- 115dB max. SPL (1% THD, @ 1kHz)
