

KeyControl 25

25-key USB Mobile MIDI Controller

KeyControl 25 is a compact 25-key keyboard, perfect for live usage on stage and in studios. The versatile MIDI controller can be used immediately after it has been connected to a sound device or to a computer. You can connect KeyControl 25 to your Macintosh or PC via a simple USB connection. No additional power supply is required.

KeyControl 25 offers numerous controllers: it has 3 wheels, 8 knobs, 8 encoders and 20 buttons. The 8 knobs and 8 encoders can even be assigned twice, just switch between the two banks by pushing a button. Of course all controllers work in real time. In addition, KeyControl 25 is equipped with a polarity changeable sustain pedal jack and you can change the sensitivity of the velocity curve.

KeyControl 25 is no longer in production and has since been replaced by the newer KeyControl 25 XT.
