

Rekord M

Professional Level Handheld Audio Recorder

Rekord M is our very affordable and compact handheld audio recorder with professional studio quality.

It has an integrated stereo microphone that allows you to record anything directly virtually anywhere. It also has a stereo line input with adjustable input gain, allowing you to record your mix directly from the output of a mixer for example. You can even connect an external dynamic microphone to the microphone input. Rekord M also features a headphone output that can be used as line output and even a built-in speaker for direct monitoring of your recordings.

The internal 4 GB of memory allows you to record more than 6 hours of uncompressed audio (or even over 17 days of compressed mp3 audio) in pristine quality. Rekord M directly connects to your Mac or PC via USB connection and gets charged via the integrated battery directly from your computer. All features are displayed via the color LCD display of Rekord M.

And of course, the most amazing feature is the extremely compact size with only 3.4 cm x 8.7 cm x 1.4 cm.

Features

- audio recorder for PCM/WAV and mp3 data
- USB 2.0 connection to computer
