Where can I find the Macintosh driver for my MIDI interface?

original release: *2012-04-21* | ID: *KB00029EN*

Our MIDI interfaces with USB port do not require any special driver for macOS / OS X.

The devices are so-called "Class Compliant" interfaces which means that they work with the native CoreAudio / CoreMIDI driver that is included in the operating system. To use them, simply connect the interface with the USB port of your Mac and you can start using it in your applications.
