Where can I find the Macintosh driver for my Keyboard?

original release: 2012-04-21 | ID: KB00030EN

Our Controller Keyboards do not require any special driver for OS X / macOS.

The devices are so-called "Class Compliant" which means that they work with the native CoreAudio driver that is included in the operating system. To use them, simply connect the keyboard with the USB port of your Mac and you can start using it in your applications.
