Can I use M4U XT without a computer?

original release: *2012-12-13* | ID: *KB00114EN*

No. M4U XT is a USB MIDI interface that requires to be connected to a computer to operate. In order to send MIDI signals through from an input to an output and/or to merge several MIDI signals, a software application is required. Many Audio-/MIDI sequencers and DAW applications provide this functionality.
