Can I use NeON under Windows Vista/7/8/10?

original release: 2014-08-14 | ID: KB00161EN

Please note that NeON is considered a legacy item that is out of production now for many years and the ongoing driver development has been discontinued. A driver for Windows Vista, 7, 8, 8.1 and 10 is not provided by us, however as the device is class compliant, the device works for audio playback and MIDI with the default driver that is part of the operating system.
