Headphone output of U46 series

original release: 2014-08-26 | ID: KB00172EN

We often get asked about the output signals the headphone output of our U46 series of audio interfaces (U46DJ, U46 SE and U46 XL) is sending out. The headphone output always sends out a mix of all output channels (1/2, 3/4 and 5/6). This makes it good for headphone monitoring in a typical recording setup, but in computer DJ setups it can be seen as a limitation and you might need to use an external DJ mixer or separate headphone amplifier or a decent headphone connected to one of the line outputs instead.
