Headphone output of GIGAPort AG

original release: *2014-08-26* | ID: *KB00173EN*

We often get asked about the output signals the headphone output of our GIGAPort AG is sending out. The headphone output (available as a 1/8" connector) always sends out a mix of all output channels (1/2, 3/4, 5/6 and 7/8). This makes it good for headphone monitoring in a typical recording setup, but in computer DJ setups it can be seen as a limitation and you might need to use an external DJ mixer or separate headphone amplifier or a decent headphone connected to one of the line outputs instead.
