## Headphone output of MAYA44 USB

original release: *2014-08-26* | ID: *KB00174EN*

We often get asked about the output signals the headphone output of our MAYA44 USB is sending out. The headphone output (available as a 1/8" connector) always sends out a mix of all output channels (1/2 and 3/4). This makes it good for headphone monitoring in a typical recording setup, but in computer DJ setups it can be seen as a limitation and you might need to use an external DJ mixer or separate headphone amplifier or a decent headphone connected to one of the line outputs instead.
