Headphone output of UDJ6

original release: *2014-08-26* | ID: *KB00177EN*

We often get asked about the output signals the headphone output of our UDJ6 is sending out. The headphone output (available as a 1/4" connector) sends out the signal that is played from your applications via output channel 1/2, making it totally independent from channel 3/4 and 5/6. This is great as it allows you to use UDJ6 in a computer DJ setup without the use of an external DJ mixer or a separate headphone amplifier as it provides one stereo channel pair for prelistening via headphones and at the same time two independent stereo line outputs provided via playback channels 3/4 and 5/6.
