Knowledge Base

Can I use Dr. DAC nano under Linux?

original release: *2014-08-28* | ID: *KB00186EN*

Yes. Dr. DAC nano is supported by the current version of the ALSA driver package via the USB audio module. ALSA is part of most common Linux distributions. Please note that the driver has not been developed by us and there are many different Linux variants and possible system configurations, so we cannot provide technical support for this. Please refer to the common online forums and discussion groups regarding audio under Linux and ALSA.
