## Issues with U46 series and OS X 10.10 - Yosemite

original release: 2014-11-20 | ID: KB00219EN

In order to make sure that an interface of our U46 series ( U46DJ, U46 SE and U46 XL) works under OS X 10.10 (Yosemite), it is important that you are using our control panel with Version 1.3 or higher. If any previous or older version is installed, the hardware cannot be controlled properly.
