What are the K.ON power supply specs?

original release: *2015-03-20* | ID: *KB00228EN*

K.ON can be used with an optional external power supply. This might be needed in case the USB power from the host computer is not powerful enough. For that, K.ON can be used with an optional standard power supply which is not available from us. Definitly a power supply is needed if you want to use the keyboard standalone without a computer.

The power supply needs to be regulated and provide **9V DC** with at least **500mA**.
The outside (sleeve) of the connector is **-**, while the inside (tip) is **+**. The connector diameter is 5.5mm (= 2.2in).

Such a power supply is a standard part that can be purchased via most music or electronic retailers and mail order companies. If you are unsure, print out this page and show it at your local shop.
