Digital S/PDIF direct input monitoring not working

original release: 2019-10-30 | ID: KB00272EN

The direct input hardware monitoring function of U24 XL is only available between the analog line inputs to the line / headphone outputs. The digital S/PDIF input signal cannot direct monitored over the line / headphone outputs.

Possible solution: most recording software applications (DAW) offer the function of software input monitoring. With this function the U24 XL digital S/PDIF inputs can be monitored.
