Can I use UGM192 under Linux?

original release: 2020-02-09 | ID: KB00274EN

Yes! UGM192 is fully class compliant and all functions can be controlled with the switches on the front panel, so it is supported by the USB audio driver from the ALSA package which is part of most Linux distributions. Please note that the driver has not been developed by us, so we can only provide limited technical support for this.
