Headphone output of GIAPORT eX

original release: *2020-02-09* | ID: *KB00278EN*

We often get asked about the output signals the headphone output of our GIGAPORT eX is sending out. There are two headphone outputs which are available via 1/4" connectors on GIGAPORT eX.

The output labeled *Mix* sends out a mix of all output channels (1/2, 3/4, 5/6 and 7/8). This makes it good for headphone monitoring in a typical recording setup (i.e. to monitor everything or to just check if a signal is there), but it might be a limitation in many DJ setups.

The output labeled 1/2 instead sends out the same signal as line output channel 1/2, making it independent from channels 3 to 8. This is great if you want to use GIGAPORT eX in a computer DJ setup without the use of an external DJ mixer or a separate headphone amplifier as it provides one stereo channel pair for prelistening via headphones, while the line outputs 3/4, 5/6 and 7/8 can be used to send out different signals.
