Can I connect headphones to MoCo?

original release: *2020-03-26* | ID: *KB00293EN*

As MoCo as a fully passive device does not have an integrated headphone amplifier, it is not possible to connect headphones to it.

MoCo was designed as a monitor controller, whose main purpose is to achieve perfect control over the monitoring volume of your studio monitors. Due to this, only studio monitors can be connected via the two separate stereo outputs. But that does not apply for the inputs of MoCo: different devices can be connected here. You can, for example, connect a sound card, an audio interface or a smartphone.
