Can I use Neva Uno / Neva Duo under Linux?

original release: *2022-12-02* | ID: *KB00322EN*

Yes! Neva Uno and Neva Duo are fully class compliant and all main functions can be controlled via the switches on the panel, so it is supported by the USB audio driver from the ALSA package which is part of most Linux distributions. Please note that the driver has not been developed by us, so we can only provide limited technical support for this.
