This driver is based on the Sensaura 3D engine version 3515. The driver is optional as MAYA EX5 can be used also without driver, depending on the situation. If you use 3D sound applications or games, this driver is recommended.

#### **Update Note**

- BSoD in DirectSound HCT test on Windows ME.
- Incorrect global reverb initialisation on system startup.
- Incorrect initialisation of Centre/LFE channel volumes on stream startup.
- Added "Product Version" information to the driver resource table.

#### **Installation**

Download the driver and run both .exe files for Sensaura Driver and Control Panel. Follow the installation instruction on the manual.
